How to play

The game starts with a random number. At each turn, you can either add the next square number smaller than or equal to the game position. The first person to reach zero wins the game.

Example:

The game starts with game position 50 and player 1 starting

The next square number smaller than or equal to 50 is 49, so player 1 can either add or subtract 49. In this case, player 1 subtracts 49.

It is player 2's turn and the game position is 1. The next square number smaller than or equal to 1 is 1, as 1 is a square number. Player 2 subtracts 1 and obtains zero, hence player 2 wins the game.

Instructions:

There are two versions of this game to which you will play. Simply play each game 5 times and record the results in the tables provided. For example, if you win the first 3 games for game 1, then record the results as follows:

Game 1

Game number	Win	Lose	Draw
1	✓		
2	✓		
3	✓		
4			
5
